Status	Finished
Started	Wednesday, 21 October 2026, 4:02 PM
Completed	Wednesday, 21 October 2026, 4:11 PM
Duration	8 mins 58 secs
Grade	**14.00** out of 15.00 (**93.33**%)

Question **1**

Complete

Mark 1.00 out of 1.00

Which of the following best describes the term "sorting" in computer science?

- a. Merging two datasets
- b. Arranging data in a specific order
- c. Finding a specific element in a list
- d. Removing duplicates from a list

The correct answer is: Arranging data in a specific order

Question **2**

Complete

Mark 1.00 out of 1.00

Which sorting algorithm is known for its simplicity and sequential comparison of elements?

- a. Heap Sort
- b. Bubble Sort
- c. Merge Sort
- d. Quick Sort

The correct answer is: Bubble Sort

Question **3**

Complete

Mark 1.00 out of 1.00

What type of problems can sorting help solve efficiently?

- a. All of the above
- b. Searching
- c. Selection
- d. Duplicates

The correct answer is: All of the above

Question **4**

Complete

Mark 1.00 out of 1.00

What is one of the key advantages of using the built-in sorted() function in Python?

- a. It sorts data out of the box efficiently
- b. It is less efficient than custom sorting algorithms
- c. It only works with integer arrays
- d. It requires external libraries

The correct answer is: It sorts data out of the box efficiently

Question **5**

Complete

Mark 1.00 out of 1.00

Which sorting algorithm would be preferred for its divide-and-conquer approach?

- a. Linear Search
- b. Binary Search
- c. Merge Sort
- d. Bubble Sort

The correct answer is: Merge Sort

Question **6**

Complete

Mark 1.00 out of 1.00

_____is putting an element in the appropriate place in a sorted list yields a larger sorted order list.

- a. Insertion
- b. Extraction
- c. Selection
- d. Distribution

The correct answer is:
Insertion

Question **7**

Complete

Mark 1.00 out of 1.00

In Merge Sort, what happens after dividing the input into smaller parts?

a. The parts are merged without sorting
b. Each part is searched for a specific element
c. Each part is sorted independently
d. The parts are ignored

The correct answer is: Each part is sorted independently

Question **8**

Complete

Mark 1.00 out of 1.00

Which Python function would you use to sort a list in-place?

a. sorted()
b. arrange()
c. order()
d. sort()

The correct answer is: sort()

Question **9**

Complete

Mark 1.00 out of 1.00

What is a significant characteristic of Bubble Sort?

a. It bubbles up the largest element in each pass
b. It divides the list into sublists
c. It uses the heap data structure
d. It recursively sorts subproblems

The correct answer is: It bubbles up the largest element in each pass

Question **10**

Complete

Mark 1.00 out of 1.00

What is one advantage of sorting a list before performing a search operation?

a. It increases the number of comparisons needed
b. It makes the search operation slower
c. It has no effect on the search operation
d. It allows for faster searching

The correct answer is: It allows for faster searching

Question **11**

Complete

Mark 0.00 out of 1.00

Which algorithm is efficient for analyzing the frequency distribution of items in a list?

a. Bubble Sort
b. Quick Sort
c. Merge Sort
d. Linear Search

The correct answer is: Merge Sort

Question **12**

Complete

Mark 1.00 out of 1.00

In the context of sorting, what does the divide-and-conquer approach involve?

a. Sorting data in a single pass
b. Sorting data sequentially
c. Rearranging data without sorting
d. Dividing the input into parts, solving each part, and combining the solutions

The correct answer is: Dividing the input into parts, solving each part, and combining the solutions

Question **13**

Complete

Mark 1.00 out of 1.00

Which of the following is not an in-place sorting algorithm?

a. Selection sort
b. Heap sort
c. Merge sort
d. Quick sort

The correct answer is:
Merge sort

Question **14**

Complete

Mark 1.00 out of 1.00

What is Bubble Sort known for?

a. Bubbling up the largest element to its correct position with each pass
b. Using the divide-and-conquer approach
c. Sorting data in a non-sequential manner
d. Being the most efficient sorting algorithm

The correct answer is: Bubbling up the largest element to its correct position with each pass

Question **15**

Complete

Mark 1.00 out of 1.00

Which sorting algorithm is described as making multiple passes through a list, comparing elements, and swapping adjacent items that are out of order?

a. Quick Sort
b. Insertion Sort
c. Bubble Sort
d. Merge Sort

The correct answer is: Bubble Sort
